EXPERIENCE

Data Analyst

Jan 2026 – Aug 2026

Intuit

San Jose, CA

- Owned analytics for Intuit Assist, Intuit's GenAI assistant across TurboTax and QuickBooks, developing SQL data models, 15+ Tableau dashboards, and Excel-based executive summaries that tracked adoption, engagement, and resolution rate across 12M+ monthly interactions for 200+ stakeholders.
- Designed and deployed Snowflake-based data pipelines processing 2TB+ daily, moving key metrics from daily to hourly refresh and cutting pipeline failures by 35%.
- Built PySpark transformations in Databricks (Delta Lake) to unify event, product, and customer data, reducing core report query time by 60% and enabling self-serve analysis for 5 product teams.
- Partnered with product and engineering to define metrics for 8 Intuit Assist feature launches and analyzed A/B tests in Python, SQL, and Excel (pivot tables, statistical functions), identifying a variant that lifted engagement by 9%.

Business Intelligence Analyst

Jun 2025 – Jan 2026

CBRE

San Francisco, CA

- Built ETL pipelines (ETL Forge, DataNet, SQL, Python) consolidating property, lease, and financial data from 3 source systems into a single reporting layer, with validation checks that eliminated recurring data errors across 12 downstream reports.
- Automated 8 recurring financial and operational reports in Python and SQL, cutting turnaround from about a day to under an hour and saving roughly 250 analyst hours per year, an estimated \$15K in annual labor cost.
- Developed a time-series forecasting model (Python, Prophet) for operating expenses and occupancy across a 120-property portfolio, adopted by finance as an input to annual budget planning.
- Analyzed 1M+ rows of leasing data using cohort and variance analysis to flag underperforming assets and cost anomalies, surfacing approximately \$40K in questionable expenses for finance review, with findings delivered through Power BI dashboards used weekly by 20+ asset management and finance leaders.

Data Analytics Engineer

Aug 2024 – Mar 2025

In Partnership with Franklin Templeton

San Diego, CA

- Built real-time analytics dashboards in Tableau and Google Sheets using Python and SQL to track transaction volume and user engagement KPIs, and engineered ETL data pipelines that improved processing throughput by ~40% and data traceability by 35%, delivering data-driven forecasting and recommendations to finance, product, and non-technical stakeholders.

Data Science Intern – GP-Model Predictive Control

Jun 2023 – Aug 2023

CERN – European Organization for Nuclear Research

Geneva, Switzerland

- Designed and deployed a GP-MPC predictive modeling framework in Python (PyTorch, TensorFlow, BOBYQA) to optimize electron beam trajectory in real time, improving prediction accuracy from 50.46% to 99.9981%, and built KPI dashboards and automated data pipelines that translated machine learning outputs into actionable recommendations for cross-functional research teams.

Data Analyst Intern

Jun 2021 – Jun 2022

SLAC National Accelerator Laboratory

Menlo Park, CA

- Managed and analyzed operational datasets across 150+ assets using Excel and Smartsheet dashboards, performing statistical and exploratory analysis, data validation, and automated reporting that improved reporting efficiency by 45% and translated complex data into actionable insights.

EDUCATION

University of California, San Diego

B.S: Data Science | Minor: Cognitive Science

Programming & Data: Python, SQL, R, PySpark, Pandas, NumPy, Excel, Snowflake

BI & Data Engineering: Tableau, Power BI, Databricks, ETL/ELT, Data Pipelines, Data Modeling, Data Visualization

Machine Learning & Statistics: scikit-learn, TensorFlow, PyTorch, Predictive Modeling, A/B Testing, Statistical Analysis, Time-Series Forecasting

Analytics: Exploratory Data Analysis (EDA), Data Cleaning, Data Validation, KPI Development, Cohort Analysis, Forecasting, Business Intelligence
